

NYT Books API

Provides:

This API provides access to NYT Bestseller lists in many categories with the ability to access any date for which there is a list. Each list contains info on each of the books, including title, author, summary, and occasionally reviews.

Key Provisioning:

Pain factor (0=ezipz...5=nightmare): 

- Super easy! Sign up at <https://developer.nytimes.com/signup> with your name, email, website (I put my GitHub link) and choose “Books API” from the dropdown. They’ll email you your key

Quotas:

- 1000 calls per day
-

The Good:

- Really useful! Lots of information and good documentation and a useful interactive environment to test out different parameters

The Bad:

- Not all books are in the “reviews” method, which is supposed to return the summary and info for each
 - Can’t really use this method reliably when looking at new books

The Ugly:

- ...
